

AKSHAY S KRISHNAN

Chennai, India | akshaysk2007@gmail.com | github.com/akshaysk7 | linkedin.com/in/akshay-s-krishnan | [Portfolio](#)

Second-year Computer Science student specialising in AI/ML, looking for a software engineering internship. I learn by building end-to-end projects: a deployed RAG system, an ML prediction pipeline, and a 24-hour hackathon prototype. Comfortable in Python, and I practise data structures and algorithms daily.

EDUCATION

SRM Institute of Science and Technology, Ramapuram

2025 – 2029 (Expected)

B.Tech, Computer Science & Engineering — Artificial Intelligence & Machine Learning · Chennai, India

Relevant coursework: Data Structures & Algorithms, Operating Systems, Computer Organisation & Architecture, Object-Oriented Programming (C++)

WORK EXPERIENCE

CHiPSET Technical Team — Competitive Programming Domain

Sept 2026 – Present

SRM Institute of Science and Technology, Ramapuram

IEEE Computational Intelligence Society (CIS)

2026 – Present

Member · SRM Institute of Science and Technology, Ramapuram

PROJECTS

Campusquer — RAG Q&A System for College Circulars

Deployed · Team of 3

- Built a retrieval-augmented generation system that answers student questions using only official college documents, citing the source document for every answer.
- Designed it to refuse when the documents don't cover a question, and to log those questions as a documentation-gap report for the college administration.
- Deployed on a 512 MB free-tier server; fixed repeated out-of-memory failures by replacing PyTorch-based embeddings with ONNX Runtime (same all-MiniLM-L6-v2 model), cutting peak memory to about 300 MB.
- Stack: **Python, FastAPI, ChromaDB, Gemini API, Docker, Render** · github.com/akshaysk7/campusquer

TrustLend — Human-in-the-Loop Loan Screening

Hackathon project · Team of 4

HackGenix 2026, Technosummit '26 · 24-hour hackathon at Sathyabama Institute of Science and Technology

- Built an ML prototype that screens bank loan applications and recognises when the model should not decide on its own, routing uncertain or unfamiliar applicants to a human reviewer.
- Developed and presented to the jury within a 24-hour hackathon.

Premier League Match Predictor

In progress

- Building a supervised classification model to predict match outcomes (home win / draw / away win) from historical match data.
- Excluded bookmaker odds from the features so the model makes its own prediction, keeping them as an evaluation benchmark; separated pre-match and post-match columns to prevent data leakage.
- Built the data pipeline in pandas: date parsing, chronological ordering, and reshaping 380 matches into 760 team-perspective rows to compute each team's recent form.
- Stack: **Python, pandas, Git** · github.com/akshaysk7/football-predictor

Portfolio Website

Live

- Personal site deployed via GitHub Pages, built with AI-assisted development and updated through a Git workflow.

TECHNICAL SKILLS

Languages: Python, C++, HTML/CSS

ML & Data: pandas, feature engineering, data cleaning, RAG, embeddings, vector search (ChromaDB)

Backend & Deployment: FastAPI, Docker, Render, GitHub Pages

Tools: Git, GitHub, VS Code, Linux/WSL

CERTIFICATIONS

Operating Systems Certification — NPTEL · Introduction to Operating Systems, IIT Madras

Jul – Sep 2026

IBM SkillsBuild — Basics of Machine Learning
