SUMMARY

Second-year B.Tech Computer Science student specialising in Artificial Intelligence and Machine Learning. Currently focused on building genuine depth in **Python** — applying it daily across data structures practice, data work with pandas, and machine learning projects taken from raw data through to honest evaluation. I learn by building things I have to finish, and I care about being rigorous with results rather than optimising for a flattering number.

EDUCATION

SRM Institute of Science and Technology, Ramapuram — Chennai

B.Tech, Computer Science & Engineering (Specialisation: Artificial Intelligence & Machine Learning) · Second year

Relevant coursework: Operating Systems · Computer Organisation & Architecture · Data Structures & Algorithms

TECHNICAL SKILLS

- **Primary language:** Python — fundamentals, data handling, problem solving (current area of focus)
- **Data & ML:** pandas, scikit-learn, data cleaning, feature engineering, model evaluation
- **Computer science:** Data Structures & Algorithms (daily practice in Python)
- **Web:** HTML, CSS, JavaScript — actively learning by building this portfolio · Django (in progress)
- **AI systems:** Retrieval-augmented generation, embeddings, vector databases, LLM APIs
- **Tools:** Git, GitHub, VS Code

PROJECTS

Premier League Match Predictor — in progress

Python, pandas, scikit-learn

- Building a supervised classification model that predicts match outcomes (home win / draw / away win) from historical Premier League data.
- Deliberately excluded bookmaker odds from the feature set: using them would mean reproducing an existing prediction rather than building an independent one.
- Working through feature engineering with the aim of extracting real signal from a high-variance domain, where even bookmakers reach only around 55% accuracy.
- Repository: github.com/akshaysk7/football-predictor

College Document Q&A System (RAG) — team project, shipped, under review

Python, vector database, embeddings, LLM API

- Retrieval-augmented generation system that answers questions about college rules and circulars, citing the source document for every answer.
- Designed to refuse questions the source documents do not cover, so the system fails visibly instead of producing confident but unsupported answers.
- Logs unanswered queries into a documentation-gap report, turning system limitations into actionable feedback for the administration.

Telegram Content Scheduler Bot

Automation, bot API, scheduling

- Telegram bot that schedules LinkedIn posts twice a week to maintain a consistent posting cadence without manual effort.

Personal Portfolio Website — ongoing frontend learning project

HTML, CSS, JavaScript

- Vibe-coded with AI assistance rather than written from scratch, and used deliberately as an active frontend learning project: each iteration means reading the HTML, CSS and JavaScript, changing it, and understanding why it behaves as it does.
- Live: akshaysk7.github.io/portfolio-website
